MuniPro | FOR RFP RESPONSE

RFP responses, *from the issuer's record.*

For RFP response teams: the issuer's full debt record, and the memo and deck built from it.

The issuer's full record

MuniPro keeps each issuer's full debt record: every series and maturity, refundings and defeasances, and obligations without a CUSIP. The response's debt section starts from that one record.

- Every series
- Every maturity
- Refundings
- Defeasances
- Obligations without a CUSIP

Memos and decks for the response

MuniPro writes a bond document memo in Word and builds a debt board brief in PowerPoint. Both come from the issuer's debt record.

DOCX Bond document memo — Word

PPTX Debt board brief — PowerPoint

Work in your AI tools

MuniPro works inside Claude, ChatGPT (as a custom connector), Rogo and GitHub Copilot through one connector. Setup guides are at munipro.com/ai.

Claude · ChatGPT · Rogo · GitHub Copilot

→ `munipro.com/mcp` → The issuer's record

Coming next for RFP teams

COMING

- An RFP radar, from issuers' public procurement pages
- Bond signals from council and board minutes

Linked to the issuer's record. We'll say when each opens.

How it works

1. Open the issuer's record in MuniPro, or ask for it in your AI tool.
2. Ask for the issuer's outstanding series in your AI tool, from the same record.
3. Build the memo or deck from the record.
